

WIDEBAND TRANSFORMERS - PC-Mount NA-Series, 100 kHz to 300 MHz

The NA-series of wideband transformers cover the 0.1 - 300 MHz frequency range in a variety of circuit configurations. The plastic package is designed to plug into a printed circuit board.

*North Hills Application Note 151 - "Wideband Transformers" provides further information on the subject.

North Hills Model # 0319NA Wideband Transformer.

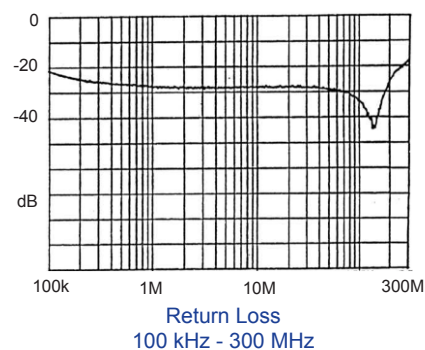

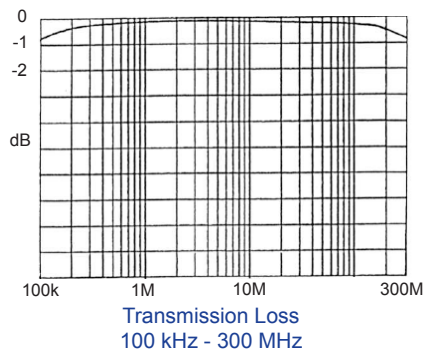

Features:

- 50 and 75 ohm models for a wide range of balanced impedances
- Superior electrical performance
- Variety of configurations available

Benefits:

- Precision-engineered
- Low insertion and return losses

Typical Characteristics (Model 0509NA):

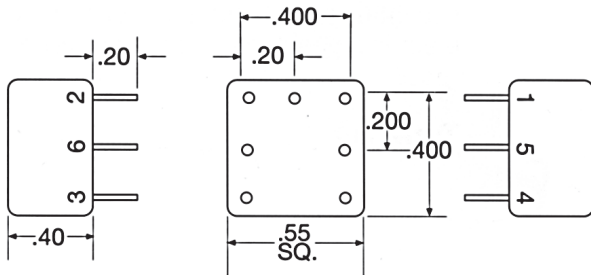

WIDEBAND TRANSFORMERS PC-Mount NA-Series

North Hills transformers are precision-engineered for low insertion and return losses

Miniature PC Mount Transformers: NA-Series - 0.10 to 300 MHz
